Skills

- Proficient: Python, C++, C, Java, SQL, TypeScript
- Technologies: Git, SQLite, GNU Make, Spring, CMake, PostgreSQL, Flask
- Selected course work: Design & Analysis of Algorithms, Performance Engineering, Information Retrieval, Compiler Construction, Operating Systems, Databases, Artificial Intelligence, Language Design and Implementation

Education

University of Waterloo

September 2022 - Now

Masters of Mathematics in Computer Science (Thesis) (94.67%)

University of Ottawa

September 2016 - April 2021

Honours Bachelor of Science in Computer Science (CO-OP) (8.35/10)

Deans Honours List

Honours project - Modelling and verifying distributed leader election algorithms with TLA+.

Work Experience

CoreOS Software Development Student

June 2020 - August 2020

Blackberry QNX

- Developed a program to detect illegal instructions in the kernel by using binary analysis tools
- Wrote Unit tests for the QNX Neutrino kernel and hypervisor

CoreOS Software Development Student

September 2019 - December 2019

Blackberry QNX

- Worked on a program to test and track new commits to Review Board
- Setup a QNX Hypervisor System with an Ubuntu guest to demonstrate its abilities to other teams
- Wrote Unit tests for the QNX Neutrino kernel and hypervisor

Telematics Control Unit Software Developer

January 2019 - April 2019

Ford Motor Company

- Developed features and Unit tests for C and C++ multi-threaded Linux applications
- Fixed bugs and multithreading related issues found by code analysis tools such as Thread Sanitizer and Clang Static Analyzer

Junior Programmer

May 2018 - August 2018

Canadian Border Services Agency

- Worked in a team of three to create a web application for the management of software development using Java, JSP, Hibernate, jQuery, SQL and Spring MVC
- Developed functional UI Mock-ups for the web application using HTML, CSS and JavaScript
- Wrote JUnit Tests for a separate reporting application
- Acquired the Enhanced Reliability Status level of security clearance

Projects

Juice - Java Compiler - Course project for Compiler Construction

January 2023 - April 2023

- Developed a Java compiler targeting x86 with two teammates
- Consisted of 28753 lines of TypeScript, 628 Jest unit tests and passed the majority of course provided test cases
- Ported and upgraded an existing Intermediate Representation (IR) interpreter from Java to TypeScript to improve the debugging process
- Wrote hundreds of Jest unit tests with final code coverage of 80%
- Source code available upon request

Lettuce - New Programming Language and LLVM based compiler

July 2023 - August 2023

- Worked with a partner to create a new programming language and corresponding compiler using the LLVM compiler infrastructure
- Developed compiler in C++ and added an interpreter mode
- Created a new IR using MLIR
- Source code: <https://github.com/rkchang/mlidk>

Document Search Engine - Course project for Information Retrieval

January 2020 - April 2020

- Worked with a partner to create a search engine and UI for searching through a collection of course listings and news articles by using the Flask web framework
- Source code: <https://github.com/rkchang/search-engine>, Final report available upon request

DNS Server

December 2021 - Now

- Currently writing a DNS server in C++ using the ASIO library
- Source code: <https://github.com/rkchang/rcdns>
